SUMMARY OF OUR DAY

- Children explored problem-solving and pattern recognition through stacking toys, sorting rings, and matching tiles.
- Activities involving colorful animal figures and dinosaur cutouts supported symbolic thinking, categorization, and imaginative storytelling.
- Use of stencils, drawing templates, and modeling clay encouraged fine motor precision, spatial awareness, and creative expression.
- Stacking rings, manipulating modeling clay, and placing blocks into toys fostered hand-eye coordination, grip strength, and dexterity.
- Floor-based play and table-top activities allowed for gross motor movement and postural control in varied settings
- Visual prompts like illustrated tiles and Cyrillic letters introduced early literacy cues, vocabulary building, and symbol recognition.

SPECIAL MOMENTS

- A child proudly holds up a handprint painting—sunshine, grass, and a red flower blooming from tiny fingers. It's not just art; it's self-expression, confidence, and a moment of being seen.
- Modeling clay becomes more than shapes—it's a medium for storytelling, sensory exploration.

EMERGING INTERESTS

- Children are consistently drawn to stacking toys, sorting rings, and matching tiles, showing a strong interest in hands-on learning, fine motor challenges, and problem-solving play.
-- Children show pride and joy in their creation
