

Children Develop An Awareness Of The Impact Of Human Activity On Environments And The Interdependence Of Living Things

When using natural materials within the environment it enables children to be observant and to use all their senses. They engage in decision making and problem-solving. They become innovators, designers, explorers, artists and collaborators as they build, sort, design, manipulate, arrange and stack natural materials in a variety of different ways.

Our Children:

- show a growing concern and appreciation for natural environments.
- explore relationships with other living and non-living things
- observe, notice and respond to changes in the environment
